---

## PROFESSIONAL SUMMARY

---

Tech Lead and full stack developer, four years across fintech, SaaS and edtech. I own the architecture and stay with the product through release: microservices in NestJS and Java, React Native apps in the stores and web platforms in Next.js. I work mostly on multi-tenant systems and white-label products: per-client data isolation, stable contracts between services and a codebase the team can grow without breaking. I work spec-driven: spec and plan before the code, agents on the implementation and human review as the merge gate.

## PROFESSIONAL EXPERIENCE

---

### Full Stack Developer

Comvanilla | Dec 2025 – Present | Remote

- Build a SaaS platform for the real estate market: CRM, ERP, property catalog, billing and the end-client portal.
- The implementation runs through agents: I write the spec and the plan, distribute the steps across the models that perform best on each one and read everything that comes back before opening the PR, with unit and end-to-end tests in CI.
- Defined the domain microservice architecture in NestJS, with gRPC communication behind an API Gateway and 30 versioned contracts in a shared package.
- Structured the web layer into nine Next.js micro-frontends, one per business domain, on an in-house design system.
- Modeled the CRM, deal, listing and billing domains on PostgreSQL with TypeORM and Redis for caching, and orchestrated long-running integrations with external systems using Temporal.
- Implemented multi-tenant isolation with Row-Level Security in PostgreSQL, with tenant resolution by interceptor and context propagation across services.
- Set up the platform monitoring — Prometheus for metrics, Grafana for dashboards and alerting, Loki for logs and the OpenTelemetry Collector — with the environments running on Kubernetes.
- Run in parallel a near-infrared spectroscopy identification platform, with a single interface for browser and desktop, integrated with the reading equipment.

### Tech Lead & Full Stack Developer

Onilearning | Oct 2024 – Dec 2025 | Remote

- Owned the technical direction of the edtech products: LMS, student portal, apps and the APIs behind them.
- Led a six-person engineering squad: architecture, standards definition, code review and technical mentoring.
- Moved the team to a spec-driven flow with agents: work started from a spec and a plan, with the project standards versioned alongside the code.
- Architected the white-label student portal — one codebase ships independent apps per institution, three brands, with integrations and features resolved by tenant configuration.
- Standardized the integration with each institution's Moodle behind a single contract, over NestJS APIs with TypeORM and MySQL.
- Published Seja, a wellbeing app, on the App Store and Google Play — React Native with Expo, Firebase social sign-in and content in four languages.
- Rolled out continuous delivery on EAS, Docker and GitHub Actions, and maintained the mobile LMS in Ionic, Angular and Cordova.

## Full Stack Developer

Postpay | Aug 2022 – Oct 2024 | Remote

- Evolved the platform of a payments fintech: microservices behind two API gateways, an operations console and a customer app on the same base.
- Split the financial core into dedicated services — ledger, receivables, advance payments, daily balance and transfers — over gRPC and messaging, with settlement and reconciliation queued to isolate partner downtime.
- Built five Pix, bank slip, settlement and e-invoice services in Java and Spring Boot, integrated with four partner institutions.
- Structured the platform IAM (authentication, role-based authorization, second factor and device management) and the protection of sensitive payment data, with tokenization, vault and keys in KMS.
- Shipped the app in React Native and Expo for Android and iOS, with biometrics and push, and standardized the admin console in Next.js and React on a design system in Storybook, with end-to-end tests.

## Full Stack Developer · Freelance

Griebler Remodeling · Mince Joias | Aug 2023 – Feb 2024 | Remote (US/BR)

- End-to-end deliveries in Next.js: website and content panel for a remodeling company in Massachusetts, in English and Portuguese with Google sign-in; and a jewelry store with catalog, cart and checkout — TypeScript, MongoDB, Tailwind CSS and AWS.

## SKILLS

---

- Languages — TypeScript, JavaScript, Java, SQL
- Back-end — NestJS, Node.js, Spring Boot, gRPC, RabbitMQ, BullMQ, REST, OpenAPI
- Front-end — Next.js, React, Tailwind CSS, shadcn/ui, Storybook, Zustand, React Query
- Mobile — React Native, Expo and EAS, NativeWind, Ionic, push and deep links
- AI in development — Spec-driven development, coding agents, orchestration across models, MCP, project context versioned in the repository and human review
- Data — PostgreSQL, MySQL, MongoDB, Redis, TypeORM, Prisma, JPA, Row-Level Security
- Infrastructure — Docker, AWS, DigitalOcean, GitHub Actions, PM2, pnpm, Turborepo
- Observability — Prometheus, Grafana, Loki, OpenTelemetry Collector, Kubernetes, Linux, Nginx
- Architecture — Microservices, micro-frontends, multi-tenancy, white-label, durable workflows with Temporal, Clean Code, SOLID
- Leadership and quality — Squad technical direction, code review, mentoring, automated testing with Jest, Playwright and JUnit.

## EDUCATION

---

- **Associate Degree in Systems Analysis and Development (ADS)** - Mar 2025 – Jun 2027 (in progress)  
Universidade do Vale do Itajaí (Univali), São José - SC, Brazil
- **Additional Training**  
One Bit Code, Rocketseat, Harvard CS50/CS50x, Java and Spring Boot courses (Alura).

## LANGUAGES

---

- Portuguese: Native • English: Intermediate
