Tech Lead • Multi-tenant & white-label architecture • NestJS • Java • Next.js • React Native

PROFESSIONAL SUMMARY

Tech Lead and full stack developer, five-plus years across edtech, SaaS and fintech. I own the architecture and stay with the product through release: microservices in NestJS and Java, React Native apps in the stores and web platforms in Next.js. I work mostly on multi-tenant systems and white-label products — per-client data isolation, stable contracts between services and a codebase the team can grow without breaking.

PROFESSIONAL EXPERIENCE

Tech Lead & Full Stack Developer

Onilearning | Jan 2026 – Present | Remote

- Own the technical direction of the edtech products: LMS, student portal, mobile apps and the APIs behind them.
- Lead a six-person engineering squad: architecture, standards definition, code review and technical mentoring.
- Architected the white-label student portal — one codebase ships independent apps per institution, three brands today, with integrations and features resolved by tenant configuration.
- Standardized the integration with each institution's Moodle behind a single contract, over NestJS APIs with TypeORM and MySQL.
- Published Seja, a wellbeing app, on the App Store and Google Play — React Native with Expo, Firebase social sign-in and content in four languages.
- Rolled out continuous delivery on EAS, Docker and GitHub Actions, and maintain the mobile LMS in Ionic, Angular and Cordova.

Full Stack Developer

Comvanilla | Oct 2025 – Present | Remote

- Build a SaaS platform for the real estate market: CRM, ERP, listings, billing and the end-client portal.
- Defined the domain microservice architecture in NestJS, with gRPC behind an API Gateway and 30 versioned contracts in a shared package.
- Structured the web layer into nine Next.js micro-frontends, each owning a business domain, on an in-house design system.
- Modeled the CRM, deal, listing and billing domains with the business team, on PostgreSQL with TypeORM and Redis for caching, and orchestrated long-running integrations with external systems using Temporal.
- Implemented multi-tenant isolation with Row-Level Security in PostgreSQL, tenant resolution by interceptor and context propagation across services.
- Run in parallel a near-infrared spectroscopy identification platform, in development: a single interface shipped to browser and desktop, integrated with the reading equipment.
- Keep the pnpm and Turborepo monorepo healthy with automated tests and end-to-end scenarios in CI.

Full Stack Developer

Postpay | Dec 2022 – Oct 2025 | Remote

- Evolved the platform of a payments fintech: microservices behind two API gateways, an operations console and a customer app on the same base.

- Split the financial core into dedicated services — ledger, receivables, advance payments, daily balance and transfers — communicating over gRPC and asynchronous messaging.
- Built five Pix, bank slip, settlement and e-invoice services in Java and Spring Boot, integrated with four partner institutions.
- Implemented asynchronous queue processing for settlement and reconciliation, isolating partner downtime from the rest of the operation.
- Structured the platform IAM: authentication, role-based authorization, second factor and device management.
- Led the protection of sensitive payment data, with tokenization, vault and key management in KMS.
- Shipped the app in React Native and Expo for Android and iOS, with biometric authentication, push notifications and an environment track up to production.
- Standardized the admin console in Next.js and React on a design system documented in Storybook, with end-to-end tests.
- Ran the infrastructure on Docker, PM2 and GitHub Actions, with development, sandbox and staging environments.

Full Stack Developer · Freelance

Griebler Remodeling | Jan 2024 – Feb 2024 | Remote (USA)

- Delivered the website and content dashboard for a remodeling company in Massachusetts: project showcase, English and Portuguese pages and Google sign-in. Next.js, TypeScript, Tailwind CSS, MongoDB and AWS.

Full Stack Developer · Freelance

Mince Joias | Aug 2023 – Sep 2023 | Remote

- Delivered the online jewelry store end to end, from layout to release: catalog, cart and checkout in Next.js, with Zustand, NextAuth, MongoDB, Tailwind CSS and AWS.

SKILLS

- Programming languages — TypeScript, JavaScript, Java, SQL
- Back-end — NestJS, Node.js, Spring Boot, gRPC, RabbitMQ, BullMQ, REST, OpenAPI
- Front-end — Next.js, React, Tailwind CSS, shadcn/ui, Storybook, Zustand, React Query
- Mobile — React Native, Expo and EAS, NativeWind, Ionic, push and deep links
- Data — PostgreSQL, MySQL, MongoDB, Redis, TypeORM, Prisma, JPA, Row-Level Security
- Infrastructure — Docker, AWS, DigitalOcean, GitHub Actions, PM2, pnpm, Turborepo
- Architecture — Microservices, micro-frontends, multi-tenancy, white-label, durable workflows with Temporal, Clean Code, SOLID
- Leadership and quality — Squad technical direction, code review, mentoring, automated testing, Jest, Playwright

EDUCATION

- **Technologist in Systems Analysis and Development (ADS)** - Mar 2025 – Jun 2027 (in progress)
- Universidade do Vale do Itajaí (Univali), São José - SC, Brazil
- Additional training — One Bit Code, Rocketseat, Harvard CS50/CS3, Java and Spring Boot courses (Alura).

LANGUAGES

- Portuguese: Native • English: Intermediate
